

HENOK ADDIS MELES

Senior Software Engineer | Spring Boot | Microservices | Fintech & Payment Integrations

Addis Ababa, Ethiopia | +251 993 934 377 | henokaddis72@gmail.com

LinkedIn: [linkedin.com/in/henokaddis](https://www.linkedin.com/in/henokaddis)

GitHub: github.com/henok-projects

Portfolio: <https://portfolio-projects-cyan.vercel.app/>

Open to Remote Opportunities and Relocation: Europe | UAE | Saudi Arabia | Qatar

PROFESSIONAL SUMMARY

Senior Software Engineer with 6 years of experience designing, developing, and maintaining enterprise applications, with a strong focus on Java, Spring Boot, REST APIs, microservices, and distributed systems. Experienced in building scalable backend platforms and fintech solutions supporting payment processing, financial data exchange, third-party integrations, and high-volume transaction workflows. Strong background in Spring Security, OAuth2/JWT, Apache Kafka, PostgreSQL, database optimization, system integration, CI/CD, Docker, and AWS. Experienced in code reviews, technical mentoring, architectural design discussions, and Agile delivery, with full-stack capability using Angular and React.

TECHNICAL SKILLS

Backend: Java, Spring Boot, Spring Security, REST APIs, Microservices Architecture, Fintech Integration

Distributed Systems & Messaging: Apache Kafka, RabbitMQ, Event-Driven Architecture, Service-to-Service Communication, Saga pattern, Circuit Breaker pattern, Outbox pattern, Retry, Spring Batch, Redis caching

Databases: PostgreSQL, MySQL, MongoDB, Database Design, Query Optimization, Indexing

Security: Spring Security, OAuth2, JWT, Authentication, Authorization, Role-Based Access Control

Cloud & DevOps: AWS (EC2, S3), Docker, Jenkins, CI/CD, Kubernetes (Working Knowledge)

Frontend: Angular, React, TypeScript, Next JS, HTML, CSS

Tools & Practices: Git, Jira, Swagger/OpenAPI, TDD, SOLID Principles, Agile/Scrum, Code Reviews

Domains: Fintech, Payment Processing, Financial Integrations, Healthcare, E-Commerce, Enterprise Applications

PROFESSIONAL EXPERIENCE

Software Engineer-Fintech-Integration — M-Pesa Ethiopia | Safaricom (Onsite) | March 2026 – Present

Technologies: Java, Spring Boot, Jenkins, Apache Kafka, PostgreSQL, Kubernetes, Docker

- Design and develop microservices-based backend services for fintech platforms serving enterprise clients, including banks and financial institutions.
- Build and maintain RESTful APIs supporting payment processing, financial data exchange, and third-party system integrations.

- Contribute to migration from monolithic systems toward scalable microservices architecture, improving maintainability, service isolation, and resilience in high-transaction environments.
- Implement secure authentication and authorization using Spring Security, OAuth2, and JWT for financial applications.
- Develop event-driven services with Apache Kafka and maintain producers and consumers for asynchronous, decoupled transaction processing and real-time data flows.
- Optimize PostgreSQL queries and indexing to reduce latency and improve reliability for transaction-intensive workloads.
- Develop and maintain Jenkins and Docker-based CI/CD processes for automated builds and deployments.
- Participate in code reviews, sprint planning, troubleshooting, and architecture discussions within an Agile fintech engineering environment.

Backend Software Engineer — HF Digital Networks PLC | *September 2024 – September 2026*

Technologies: Spring Boot, React, Next.js, PostgreSQL

- Developed and maintained an HMS platform supporting Hospitals and clinics.
- Built RESTful backend APIs using Spring boot and integrated them with React-based frontend applications.
- Developed patient management, order processing, and payment workflows supporting core HMS operations.
- Improved application performance through database query optimization and indexing.
- Collaborated with UI/UX designers and QA engineers to deliver production features according to project requirements and schedules.
- Added automated test coverage using Jest and Mockito.
- Progressed from Intermediate Software Engineer to Full Stack Developer with increasing ownership of application features and integrations.

Full Stack Software Engineer — Maximus (Remote) | *September 2021 – 2025*

Technologies: Java, Spring Boot, Angular, PostgreSQL, AWS, Docker

- Designed and developed microservices-based backend services for an enterprise business management platform.
- Contributed to migration of a monolithic application into modular microservices to improve maintainability and scalability.
- Designed and implemented RESTful APIs consumed by web applications and third-party systems.
- Implemented secure authentication and authorization using Spring Security, OAuth2, and JWT.
- Improved database performance and application reliability through PostgreSQL query optimization and indexing.
- Implemented CI/CD pipelines using Jenkins and Docker to automate application build and deployment workflows.
- Participated in code reviews, sprint planning, troubleshooting, and system architecture discussions.
- Mentored junior developers and provided technical guidance on backend development practices while collaborating with cross-functional team members in a remote environment.

SELECTED PROJECT EXPERIENCE

Full Stack Lead — Healthcare Management Platform |

Technologies: Java, Spring Boot, React, Redux, PostgreSQL

- Developed patient registration, appointment scheduling, and electronic medical record modules.
- Implemented secure role-based access control for doctors, nurses, and administrative users.
- Developed telemedicine consultation functionality and notification services.

- Integrated multiple healthcare modules into a unified platform to improve clinical and administrative workflows.

SELECTED PROJECT EXPERIENCE (CONTINUED)

Backend Developer — Enterprise Company Portal |

Technologies: Java, Spring Boot, Angular, MySQL, Redis

- Developed REST APIs and backend services supporting internal enterprise operations.
- Improved application response times using Redis caching and database query optimization.
- Implemented Swagger/OpenAPI documentation to support integration teams.

Full Stack Developer — E-Commerce Platform |

Technologies: Node.js, React, Laravel, MongoDB

- Developed product catalog, merchant onboarding, and order-processing functionality for a multi-vendor marketplace.
- Integrated payment-processing workflows and real-time user interaction functionality.
- Developed and supported features enabling merchants to manage products and customer orders.

CORE COMPETENCIES

- Enterprise Application Development | Microservices Architecture | RESTful API Design & Integration
- Distributed Systems | Kafka & RabbitMQ | Database Design & Query Optimization
- Secure Authentication & Authorization | Cloud Deployment & Containerization | CI/CD
- System Performance Monitoring & Troubleshooting | Agile/Scrum Development Practices

EDUCATION

B.Sc. in Software Engineering — Addis Ababa University | 2017 – 2021

CERTIFICATIONS & TRAINING

- Kubernetes Fundamentals — Udacity, 2022
- Full Stack Development Training — 2021
- Hackathon Winner — U.S. Embassy Technology Challenge, 2021

ADDITIONAL INFORMATION

- Comfortable working in distributed and remote engineering environments.
- Strong written and verbal English communication.
- Open to international remote opportunities and relocation; available for immediate or short-notice relocation.
